

Eppivent toilet is magic!!
You see the pedestal, but the magic part is out of sight!

It truly is like no other**

**Waterless,* no bad smells, vented, lateral flush, no composting, non-electric,
pathogen free minimal effluent**

We believe no other toilet does what our **EPPIVENT** does.
Perfect for off-grid.

These six features combine to make our EPPIVENT a toilet unique.

- 1 Uses no fresh water after initial fill** (Earth's precious fresh water is preserved.)
- 2 Has no bad smells.** (It does not have the typical unpleasant anaerobic smell, nor heavy "perfume" deodorant cover up smell, or human waste smell. It smells as good as ordinary well vented compost toilets and flush toilets.)
- 3 No composting chores required.** (No covering with sawdust, no raking, etc. It deals with waste on site and straight away!)
- 4 Has a flush to move contents in bowl/pan out of sight of user.** (It is pleasant to use.)
- 5 Requires no electricity.** (Other than that produced by solar panel & backup 12 V battery. It is free-standing, needing no supporting infra structure.)
- 6 Minimal effluent, pathogen free.** (prevents diseases caused by poor sanitation).

** As of launch date, we think no other affordable toilet has all these features.

*After initial fill.
